PILOT-MVP: Universal Programmer

- Universal and Flexible
- Software Controlled From PC or Compatibles Through Standard Printer Port
- Easy New Device Support Via Disk or Modem
- Supports Programming of Security Fuse(s)
- Wide Range of Package Types Supported via Reliable Factory-Supplied Modules and Not Third-Party Adapters
- 4 Years of Free Software Updates Via BBS
- S/W Programmable Universal Pin Drivers at Each Pin
- Universal 110/230 Volt Automatic Switched AC Input
- Made in USA

PILOT-MVP provides a very cost-effective and reliable solution for programming Intel microcontrollers.

PILOT-MVP is controlled by Advin's fast and easy-to-use software, operating on IBM PCs and compatibles. Since the PC-interface is through a standard paallel printer port, no PC slot is required. Therefore, you get the benefit of easy portability from one PC to another. You can also operate them from a notebook computer via its standard printer port.

Its macro/batch facility allows you to collect frequently used commands in a macro file which can be invoked later for fully automated operations. This and other popular features make the programmer a time-saving instrument for you. They also shorten the training process for your production personnel.

All package types are supported, including DIP, PLCC, PGA and QFP. Package adapters are factory made, tested and guaranteed to work.

MICROCONTROLLERS SUPPORTED:

87C196KB/KC/KD, 87C196KR/JR, 87C196KS/KT/JT, 87C196JQ/JV, 87C196KQ, 87C196CA/CB, 87C196NT/NP, 87C196MC/MD/MH, 8xC5x, 8xC5xFX, 8xC51RX, 8xC51SL, 8xC251Sx (Please contact factory for current list)

DEVELOPMENT PLATFORMS:
IBM PCs or compatibles, notebooks
