

i960[®] Microprocessor Support Packages

- Real-Time Trace
- Single-Connection Probe Adapters
- Acquires All Bus Cycle Types at Full Speed
- Timing Analysis on All Channels Through the Same Probe Adapter
- User Configurable Bus Cycle Termination For Each i960[®] CA/CF Processor Memory Region (CA/CF Support Only)
- Disassembly of All prefetches From 8, 16 and 32-Bit memory regions

i960 processor support packages for DAS and TLA logic analyzers are time-saving debug and analysis tools for designers using i960 embedded RISC microprocessors. They include a single-connection probe adapter for easy connection to the users system and setup and disassembly software for the specific device used. These products, with a DAS or TLA, allow designers to monitor all processor activity and display it in several useful formats.

HOST SYSTEMS SUPPORTED:
These software products execute on the TLA or DAS directly and can be operated from any X11 display server.

PROCESSORS SUPPORTED:
i960 CA/CF, KA/KB, JA/JD/JF Processors
