# LaserAct* (Multiple Levels of PCL-Compatible) Software

- PCL 4, 4.5, 5 and 5+ Interpreters With Provisions for Extended Capabilities
- 100% Compatible with Industry Standard
- Open System to Accommodate Multiple Font Standards
- Can Directly Access Hardware to Maximize Performance or Incorporate an Operating System Layer for Flexibility

Destiny's LaserAct* software is 100% PCL* (HP LaserJet* compatible) with 40-50% better performance. It is implemented in a printer via embedded controller, add-in printer controller, or plug-in cartridge.

Destiny introduced LaserAct 5 in late 1990, one of the first PCL 5 emulations providing all standard HP features with provisions for extended color, network, and fax capabilities. LaserAct 5 includes on-the-fly font scaling from .25 point to 999.99 point size; powerful image modeling to create special effects; increased overall printing performance through data compression; and multiple orientations of text printed on the same page.

All of Destiny's LaserAct software can be customized to add OEM specified features e.g. fax or networking. The software has been developed in-house and is available to OEMs through licensing.
