Value Series 100 Flash Memory PC Card Evaluation Kit

- Complete solution for adding a PCMCIA socket to an ISA-based system
- Includes a 2-Mbyte Value Series 100 Flash Memory PC card
- Includes ISA-based PCMCIA reader/writer that fits into an empty 3.5" or 5.25" floppy bay
- Created for Intel architecture, MS-DOS*- or Windows*-based systems
- Includes source code and documentation for non-DOS system development
- Includes SystemSoft's PCMCIA software suite
- Contains M-Systems' TrueFFS* industry-standard FTL Flash Media Manager
- Excellent for evaluating flash card performance with multiple software configurations
- Excellent for developing flash card embedded applications

The Value Series 100 Flash Memory PC Card Evaluation Kit (FLASHVALUEKIT) quickly and easily enables the use of Intel flash cards with MS-DOS-based ISA systems. This kit provides everything necessary to add a PCMCIA socket to a desktop system.

The Value Series 100 Flash Memory PC Card Evaluation Kit ideally suits the needs of designers creating mobile, handheld and sub-notebook products; designers who want to evaluate flash card products for embedded applications; and ISVs who write software for flash card products.

To shorten time-to-market, this kit contains all necessary tools in a single box, thus eliminating the time-consuming task of seeking and obtaining separate components.

This kit includes SystemSoft's latest PCMCIA software suite. The evaluation kit also supplies the designer with M-Systems' TrueFFS - an industry standard FTL Flash Media Manager

solution. Additionally this kit includes source code and documentation for Intel embedded flash file systems, flash media managers and utilities, enabling modifications for specific system requirements or product differentiation.
