

## Card Manager

- Engineering tool for data storage PC Cards
- Erase, blank check and program linear flash PC Cards
- View and edit data on any PC Card
- Program EEPROM attribute memory
- Supports binary, Intel Hex and S-record files
- Three versions for DOS command line, DOS menus and Windows\*

Adtron's Card Manager simplifies the initialization and programming of PC Cards. Card Manager allows formatting, partitioning, programming, erasing, viewing and editing data for a wide variety of data storage PC Cards. The list of supported cards includes Intel Flash memory cards and other memory technologies.

Available in three versions, Card Manager operates from the DOS command line, DOS pop-up menus and Windows. Ideal for use in batch files, the command line version, CMGRC, provides a complete set of return codes, enabling the batch file to handle pass/fail results. The pop-up menus of the CMGR version allows the use of a mouse to make selections and presents the results and data in easily readable DOS menus. For Windows users, CMGRW provides easy-to-use Windows features including graphical display presentation and mouse-driven selections.

Adtron support includes a technical applications staff for telephone support and custom designs, software updates through the Adtron bulletin board, web home page and email. Other Adtron software products include device drivers for DOS and Windows, extended BIOS boot code, programming utilities and PC Card enablers.
