- CardWizard* (Windows* 3.1x) and CardWorks* (Windows 95) included
- FTL flash software included upon request
- Compliant with PCMCIA 2.1
- State-of-the-art case design

Acma Computers, an award-winning PC system and component manufacturer, supplies a wide range of products to users in the PC market that demand PCMCIA reader/writer capability for desktop and notebook computers. Intel Flash memory card products support our customers both in product offering and with Intel's support, service, and product compatibility evaluation of our reader/writers.

The TSE-200 connects two Type II PCMCIA slots to your computer. These two slots also accommodate one Type III PC Card. The unique design of the TSE-200 utilizes a 16-bit ISA interface card and a special high-density cable which allows use of the full range of PCMCIA devices (unlike external PCMCIA reader/writers using parallel or serial port designs).

The TSE-200 is compatible with most i386™, i486™, and Pentium™ microprocessor-based computer systems. A specially-designed interface card is included for installation in an open 16-bit ISA expansion slot in your computer. All TSE-200 PCMCIA reader/writers are shipped with CardWizard for Windows 3.1 and CardWorks for Windows 95 from SystemSoft Corporation.

Acma has worked with Intel's Flash Memory Division to ensure that TSE-200

reader/writers are compatible with Intel Flash memory cards. Our reader/writer is also qualified as "SystemSoft Certified" by SystemSoft Corporation. TSE-200 PCMCIA reader/writers are currently used for development by companies such as Sun Microsystems, Quantum Corporation, and National Semiconductor.

Acma uses only high-quality standard hardware and software, including Intel-based Vadem controller chips and Berg connectors. Combined with the sleek external case designed by National Semiconductor, the TSE-200 is a product of excellence.

INTEL FLASH MEMORY SUPPORTED:
Series 2 Cards, Series 2+ Cards
