

CardDock

- Use laptop/notebook PCMCIA technology at your desktop
- Universal support for PCMCIA-compliant PC Cards
- Fully Intel Flash memory card compatible
- Available in 2-slot with/without phone jack, 2-slot with 1.44 Mbyte FDD, and 4-slot configurations
- Mounts in a standard 5 1/2" half-height drive bay slot
- Supports multiple combinations of Type I, II and III PC Cards (up to 15mm)
- Card and Socket Service software for configuring the system and managing I/O ports
- Convenient front panel jack for phone and other communications
- DOS and Windows* compatible

As personal computer technology continues to evolve towards mobile computing, credit-card sized PC Card technology has quickly become a dominant standard. Greystone Peripherals now offers the CardDock line of internal reader/writers as an invaluable link between the desktop PC and mobile (laptop/notebook/palmtop) computers using PCMCIA Cards. The CardDock enables total interchangeability of PC Cards for the sharing of peripherals, updating files, and modifying and loading software.

The CardDock reader/writer supports flash memory and I/O cards that are designed to PCMCIA standards. Each CardDock socket accommodates PC Card form factors of up to 15mm - an important feature that allows the simultaneous use of Type III or larger PC Cards in each slot!

In addition to the standard LED read/write activity indicator and push-button ejector features on the front panel, the CardDock provides a convenient jack for easy plug-in of fax/modem and network communications cards. This feature eliminates awkward rear slot connections and long cords each time a communications card is used.

Standard 5 1/2-inch half-height drive bay-mountable CardDock models are available in 2-slot (with or without phone jack feature), 2-slot with one 3.5-inch 1.44 Mbyte floppy drive combo, and 4-slot versions. Every CardDock comes complete with hardware and software for turnkey operation. Each CardDock includes a 16-bit AT-bus interface card, cables, and a full complement of software utilities which manage system resources and provide easy to use pop-up menus.

With the CardDock, desktop PC users can enjoy the plug-and-play benefits of using PC Cards. The function of one PC Card, whether memory or I/O, can be used interchangeably by both mobile and desktop PCs as needed. Card and Socket Services seamlessly manage the auto-configuration of each PC Card as it is inserted and removed at any time.

INTEL FLASH MEMORY SUPPORTED:

Series 2 Cards, Series 2+ Cards, Value Series 100 Cards, Series 100 Miniature Cards
