

## TM-6000

- Offers automatic taping of bowl-fed and tube-fed parts
- Four independent pick heads offer maximum flexibility and easy changeover
- Can be configured to provide test or vision
- Can seal heat seal or pressure-sensitive covertapes
- Pick and place head commands set through software interface
- Parts can be rotated for proper orientation to the pocket

When your taping needs require the flexibility of a four head system or a test station, V-TEK's TM-6000 automatic taping machine may be just the machine you are looking for. The pick and place function features a turret assembly and four pick and place heads. As the turret rotates, each head stops at one of four stations...pick-up, test, reject, and placement. This simple design also incorporates the ability to rotate the part between each station in the process.
