BusBIOS* Web Server Acceleration Solution

A Growing Family of Acceleration Solutions

- Web Servers
- File/Application Server
- Enterprise VLAN Servers

Market Leaders in Server Acceleration Solutions Xpoint's Application/File Server Acceleration solution employs BusBIOS peer-to-peer data transfers and i960® processor-based acceleration engines to break the glass ceiling that traditionally limits web server I/O providing dramatic improvements in system performance.

INTELLIGENT I/O STANDARDS-BASED COMPLIANCE

The $I_2O^{™}$ Special Interest Group (SIG), has defined standards for intelligent I/O to provide "mainframe I/O" to PC-based platforms. Xpoint's BusBIOS is a fundamental component of this initiative. Xpoint's BusBIOS family of server acceleration solutions are designed to be compatible with the industry leading I_2O adapters and system boards. For a hardware compatibility list of supported I_2O LAN adapters and system boards contact Xpoint or visit our web site.

SETTING NEW STANDARDS FOR FILE SERVER PERFORMANCE

The performance/efficiency index is the standard metric of network adapter performance measurements. This index is the ratio of a file server's throughput relative to the CPU utilization required to achieve that level of throughput. Xpoint's BusBIOS acceleration solutions provide industry-wide performance/efficiency leadership.

## INNOVATIVE SOLUTIONS TO REDUCE YOUR TOTAL COST OF OWNERSHIP

Xpoint's innovative BusBIOS server acceleration solutions will maximize your investment dollars by increasing server performance and capacity. Xpoint's BusBIOS Enterprise VLAN Server

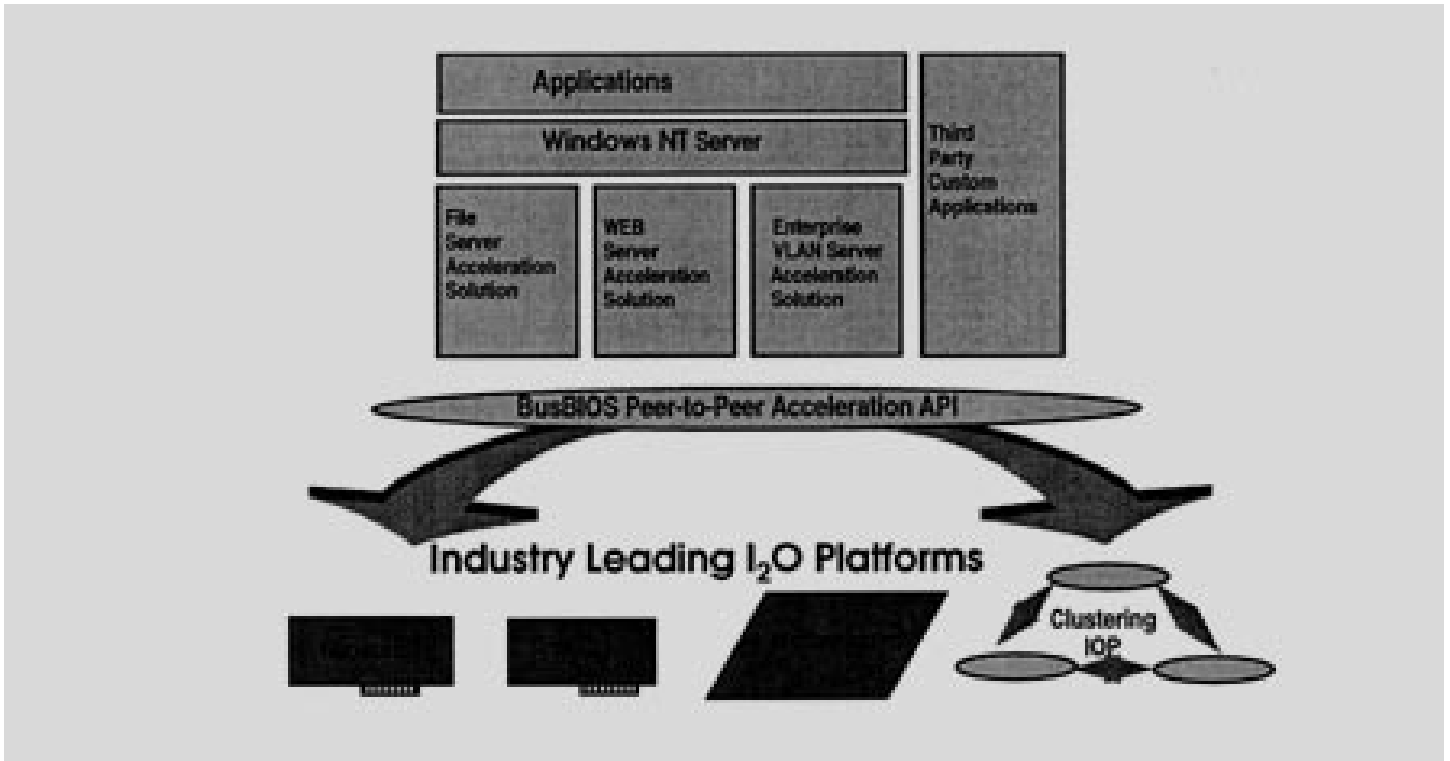

Acceleration Solution will reduce your administration and infrastructure costs by enabling the attachment of your servers directly to your VLAN backbone.
